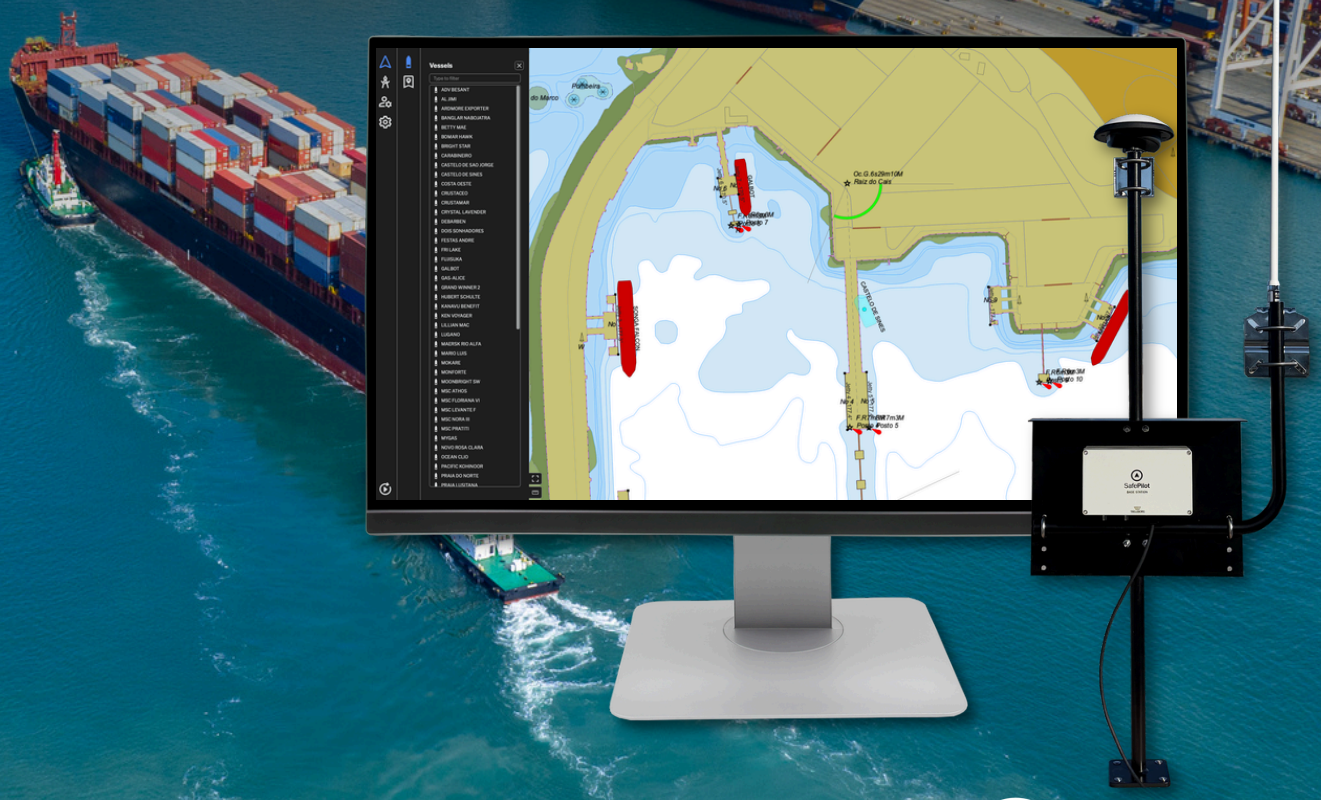
SafePilot OPS: One operational view, from shore to bridge.

PREPARE, COORDINATE AND REVIEW PILOTAGE OPERATIONS FROM ONE SHARED OPERATIONAL PICTURE.

SafePilot equips your pilots on the water. SafePilot OPS connects them with your shore team, so everyone works from the same operational data. The included SafePilot Base Station provides dedicated local GNSS corrections and AIS.



SafePilot

BASE STATION INCLUDED

SUPPORT AND UPDATES INCLUDED

ONE SUBSCRIPTION

Designed for port operations
A shore-side view for chief pilots, harbor masters and pilots.

Connects shore to bridge
Your pilots and shore team work from the same operational data.

Your pilots and shore team on one picture

SafePilot OPS is the shore-side platform for pilotage operations within the SafePilot ecosystem. It connects your pilots on the water with the chief pilots, harbor masters and shore teams managing operations ashore, creating one shared operational view. Delivered as one subscription that includes the SafePilot Base Station, with ongoing support, maintenance and updates.

SHARED OPERATIONAL PICTURE

Work from the same data, ashore and on the bridge.

SafePilot OPS brings active pilotage work, vessel movements and your local information into one shared operational picture. Your pilots and shore team work from the same operational data.

FULLY SUPPORTED ECOSYSTEM

One subscription. Ongoing support and updates.

Delivered as one subscription, with ongoing support, maintenance and updates. SafePilot OPS runs on the same technology trusted by pilots in ports worldwide and can scale as your operations grow.

SHORE-SIDE MANAGEMENT AND PUBLISHING

Manage and publish from shore.

Centrally manage pilots and charts by pilot group. Prepare overlays, fender lines and annotations ashore, publish them to the right group and revert them if needed.

OPERATIONAL RESILIENCE AND CONTINUOUS LEARNING

Detect GNSS disruption. Replay every job.

Recognize GNSS jamming and spoofing, and replay completed pilot jobs from Cloud for training, debriefing and incident follow-up.

DEDICATED LOCAL POSITIONING FOR YOUR PORT

The SafePilot Base Station provides the real-time GNSS correction data behind centimeter-level positioning and gives your port a private, dedicated infrastructure. It integrates an AIS receiver, and can be extended with optional weather sensors, an anti-jamming antenna and solar power.

Technical requirements: SafePilot OPS runs on a Windows 11 computer and is available through the Microsoft Store.
Base Station requirements: PoE+ Ethernet, single-pole mount and optional LTE-M.
