

ENVIRONMENTAL POLICY

As a company, Trelleborg Engineered systems recognise that virtually all the activities of an organisation or an individual have some impact on the environment. Our aim is to reduce the environmental impact of our activities through a programme of continuous improvement.

In this respect our policy is to:

Comply with the relevant legislation applicable to our business.

Integrate environmental decisions into relevant business objectives in a cost effective manner.

Quantify and monitor environmental impacts of the business, including new projects, and set specific targets for improvements.

Require all employees to address environmental responsibilities within the framework of normal operating procedures, and to provide information and training to all employees to enable this to function.

Minimise waste, seek to recover and recycle as much as is economically practical, and ensure that the appropriate waste streams are used.

Develop appropriate emergency response plans for major incidents in order to minimise their environmental impact.

Commitment to prevent any environmental pollution.
