

Matting and accessories

Tactile flooring

Our wayfinding system for the visually impaired, consisting of warning surfaces, guidance paths, junction tiles and information surfaces, is made of a fire and wear resistant rubber material that makes it excellent to make any other element for safety or decorative use in public places.

That is why, in the range of our fire resistant products, we offer high quality M2F1 class **matting**.

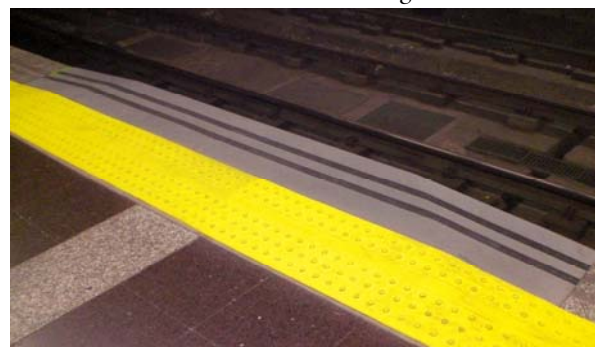

We also include accessories, e.g. **stair nosing** to reinforce the edge of treads, the purpose of which is twofold, to improve the visual perception of stairs for the visually impaired and to protect the stairs from pedestrian traffic wear; wall **corner angle** to reinforce impact and abrasion resistance in transit areas; or other **decorative or safety elements** such as ramps, skirting boards, door skirts, etc.

Any of these elements can be made to measure in a wide range of colours to contrast with the surrounding floor, blend with other elements of the environment or adapt to corporate colours. Standard colours are: yellow, blue, light grey and dark grey.
