

Guarantee

Tactile flooring

From the moment of the installation, we offer a five-year guarantee for our range of tactile flooring M2f1 installed indoors and in accordance with our General Sales Terms and Conditions. Outside of these conditions the guarantee is for two years.

For this reason the installation process must be properly conducted including the final stage of production.

This implies:

- ◆ The use of products recommended under the supervision of Trelleborg or the authorised fitter.
- ◆ Periodical cleaning and treatment in accordance with the instructions.

Our guarantee covers those installations carried out indoors (with a range of temperature between 10°C and 40°C) and in environments which are exclusively for human transit.

This guarantee does not cover damage caused by traction produced by heavy material on the strips, cuts caused by sharp items, alterations produced by spilling of corrosive materials or acids, burns caused by applying a flame to the surface or other damages produced by acts of vandalism including possible problems derived from under floor defects or structural movements.

For more details on the flooring guarantees, do not hesitate to contact us at:
