To All Trelleborg Pipe Seal Customers

Re: ARRA & Leeds Certification Information

All of our rubber EPDM polymer compounds used in Kor-N-Seal products are manufactured by two different suppliers near Akron, Ohio. There is no recycled material content in the rubber compounds as they must be 100% virgin material to meet ASTM material performance requirements.

The 304 Stainless Steel used in our expansion bands comes from two different mills, Allegheny Ludlum Steel primarily from their Coatesville, PA mill and one of two A.K. Steel works in Butler, PA or Mansfield, OH. According to both suppliers the amount of recycled content varies, but is in excess of fifty percent.

The rubber compounds are extruded and spliced here in Milford, NH and the stainless steel from our two suppliers is also rolled, cut, and assembled in our New Hampshire factory. All final assembly, testing and shipping is from Milford, NH.

Should you need further details please do not hesitate to contact me or anyone in our customer service department.

Sincerely,
