

NPC — Waterstop Grouting Ring

- *Establishes a watertight connection between manhole wall and pipe*
- *Installs in minutes - saving time and money*
- *Great for re-establishing watertight connections at manhole after pipe bursting*
- *Can be used with most types of pipe*

Resilient rubber and stainless steel bands, combined with mortar creates a highly effective seal.

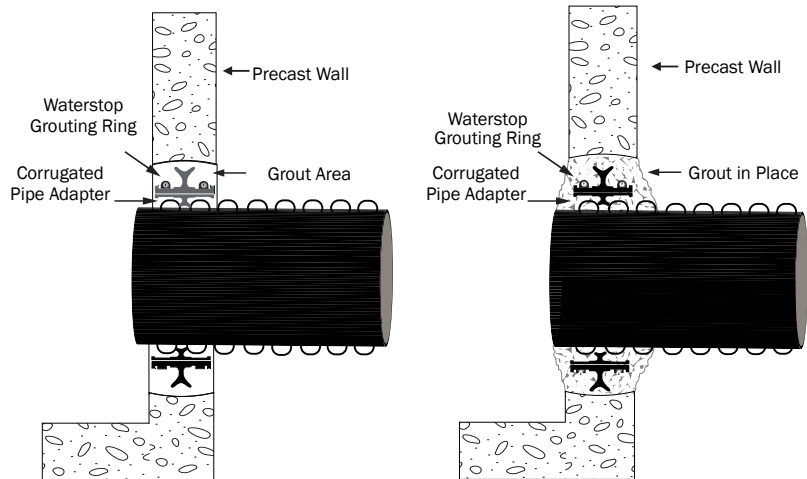

NPC – Waterstop Grouting Ring

Installation Instructions:

1. Fit the Waterstop Grouting Ring around the outside diameter of the pipe. Position it so that the ring will be in the middle of the structure's wall thickness.
2. Install the stainless steel pipe clamps around the groove of the grouting ring and tighten to 60 inch pounds using a T-Handle Torque Wrench (p/n 80090).
3. The pipe is now ready to be mortared or cast into the concrete structure. A high-strength, non-shrinking grout is recommended for mortaring (or brick and mortaring) pipe connections in place.

Waterstop Installed on Corrugated Pipe

Waterstop Installed on Smooth-Wall Pipe
