NPC KOR-N-SEAL® FLEXIBLE PIPE-TO-MANHOLE CONNECTORS

Trelleborg Pipe Seals designs and manufactures the products listed above to comply with the ASTM C923 Standard Specification for “Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes and Laterals.”

Our product warranty requires that proper installation procedures are followed and that all dimensions for hole size and pipe diameter are in compliance with our most recently published specifications. All connections must be made using smooth-wall, rigid pipe, or pipe adapters. Trelleborg NPC does not warrant for any complications due to connector pipe deflection, out-of-roundness, or leak paths due to any protrusions, ribs, spirals, or convolutions on the surface of connecting pipes.

Trelleborg Pipe Seals Kor-N-Seal connectors are manufactured to meet our internal quality control procedures.
