

Group Environmental Policy

At Trelleborg we provide solutions that protect the essential and also help our customers improve their environmental credentials. We are committed to continuously improving our environmental performance in order to preserve, protect and improve the quality of the environment and to protect human health. This policy states the Group's position on issues related to environmental matters.

The policy consists of **five key policy areas** which reflect the most important environmental topics for Trelleborg.

ENERGY AND CLIMATE

- We shall set climate targets to reduce our impact upon the climate including targets for the reduction of CO2 emissions from our own operations and along our entire value chain.
- We shall work to continuously improve our energy efficiency in line with our Energy Excellence program.
- We shall reduce the carbon intensity of our energy mix by striving to phase out fossil fuels and increase the share of renewable and/or fossil free energy.
- We shall monitor negative impacts on climate that may occur in our supply chain and take corrective measures when necessary.

WATER

- We shall work to reduce water withdrawal in our production processes and to increase re-use of water.
- We shall strive to improve water efficiency, and in particular where those of our production units are located in areas with high water stress levels.
- We shall aim to minimize our impact on marine resources.
- We shall monitor negative impacts on water and marine resources that may occur in our supply chain and pursue corrective measures when necessary.

BIODIVERSITY

- Our aim is to manage the impacts of our production sites upon nature and biodiversity.
- We shall monitor negative impacts on biodiversity that may occur in our supply chain and pursue corrective measures when necessary.
- In line with Trelleborg's circularity target, we shall look to mitigate any negative impact from the in-creased use of biobased raw materials.

POLLUTION

- Pollution prevention shall be an essential consideration for all our operations.
- We shall follow good housekeeping and management practices when managing pollution.
- Environmental considerations are taken into account when changing our processes and technologies.
- We shall seek to implement measures to reduce or eliminate any potential soil, water and air pollution arising from our activities.
- We shall continue to evaluate and when possible, reduce and replace harmful substances and materials used in our operations.

CIRCULARITY

- We will increase our share of recycled or bio-based raw material.
- We shall consider our customer's needs and those of the wider society with the ambition to be more sustainable when developing our products and solutions.
- We will assess and aim to address foreseeable environmental, health, and safety-related effects associated with our processes, products, and solutions to support the circular economy and efficient use of resources.
- We shall take into account the complete life cycle when designing our products with the aim of reducing their environmental impact in production, use and disposal.
- We shall strive to reduce the amount of waste generated in production and directed to disposal while increasing recycling.
