

Trelleborg introduces XP700 tire for low intensity material handling applications

Trelleborg launches the XP700 tire for low intensity material handling applications.

The new XP700 tire features deep lugs for enhanced traction and a compact lateral block design to minimize vibration. Designed to perfectly match the needs of low intensity material handling operations, the new XP700 delivers reliability, adequate load capacity and good steering ability, while minimizing downtime to keep costs under control.

The tire also incorporates Trelleborg's easy to recognize, user-friendly labelling system to help customers select the right tire for their operations according to application specific requirements and intensity, improving overall performance.

Alessio Bucci, Product Marketing Senior Manager at Trelleborg Wheel Systems, says: "In today's multitude of material handling operations, having the right solution is key to maximizing efficiency. As a tire expert, Trelleborg keeps on delivering the perfect tire for low intensity material handling applications with its new XP700 tire. This follows the release of the XP800 for medium and the XP1000 for maximum intensity applications."
