

Preventing abrasion damage

Njord C (Centralizer)

In the subsea environment ocean currents increase the chance of abrasive damage of supported lines within tubes. Over time this damage could put the connections at risk.

Njord C (Centralizer) function is to allow any flexible or rigid line, or multiple lines, to be centered in an I-Tube, J-Tube, tunnel or larger diameter pipe.

Installation

Njord C is installed onto the cable or pipe prior to deployment and pulled in as one unit.

Reduced pull in loads

Their low coefficient results in reduced installation loads when the line is being pulled in.

Abrasion protection

Njord C prevent the supported line from touching the inside of the tube into which they are being pulled, preventing abrasion damage.

Key Applications:

To meet our customers' needs, our cutting-edge solutions can be used for the below applications:

- Cable
- Umbilical
- Pipeline
- Combinations of cables, umbilicals and pipes

Contact Us

Trelleborg Applied Technologies division is an industry expert in delivering innovative and reliable solutions that maximize performance for our customers. Our vast range of specialized, customizable materials ensure peace of mind at every stage of your project. With reliable and efficient project management and manufacturing we endeavour to take performance to new levels by achieving your goals safely, on time and within scope.
