

Load Cell Exchange

The Trelleborg Load Cell Exchange program offers a simple solution to load cell calibration, while minimizing downtime.

‘The Trelleborg Load Cell Exchange allows terminal operators to easily comply with the SIGTTO/OCIMF Jetty Maintenance and Inspection Guide recommendation for annual calibration.

LOAD CELL EXCHANGE PROGRAM

The Trelleborg load cell exchange program works in the following way:

- A full jetty set of calibrated load cells is delivered to site on an annual basis.
- Existing load cells are removed from the hook and the freshly calibrated load cells are installed.
- The old load cells are simply picked up and returned to Trelleborg.

If required, a Trelleborg engineer can attend to work with the site crew or talk to us about doing it all.

BENEFITS

- Fast turnaround time. No need for calibration equipment equals less time on site. Load cells are simply changed out.
- Guaranteed results. Load cells are factory calibrated and ready to install.
- Meets SIGTTO recommendations for annual calibration.
- Load cells are warranted for the length of the agreement.

Many industry leading companies are choosing load cell exchange.

Load cell exchange is part of the Trelleborg suite of site services and can be conveniently packaged with training, site audits or programmed maintenance.
