NEW PILOTAGE

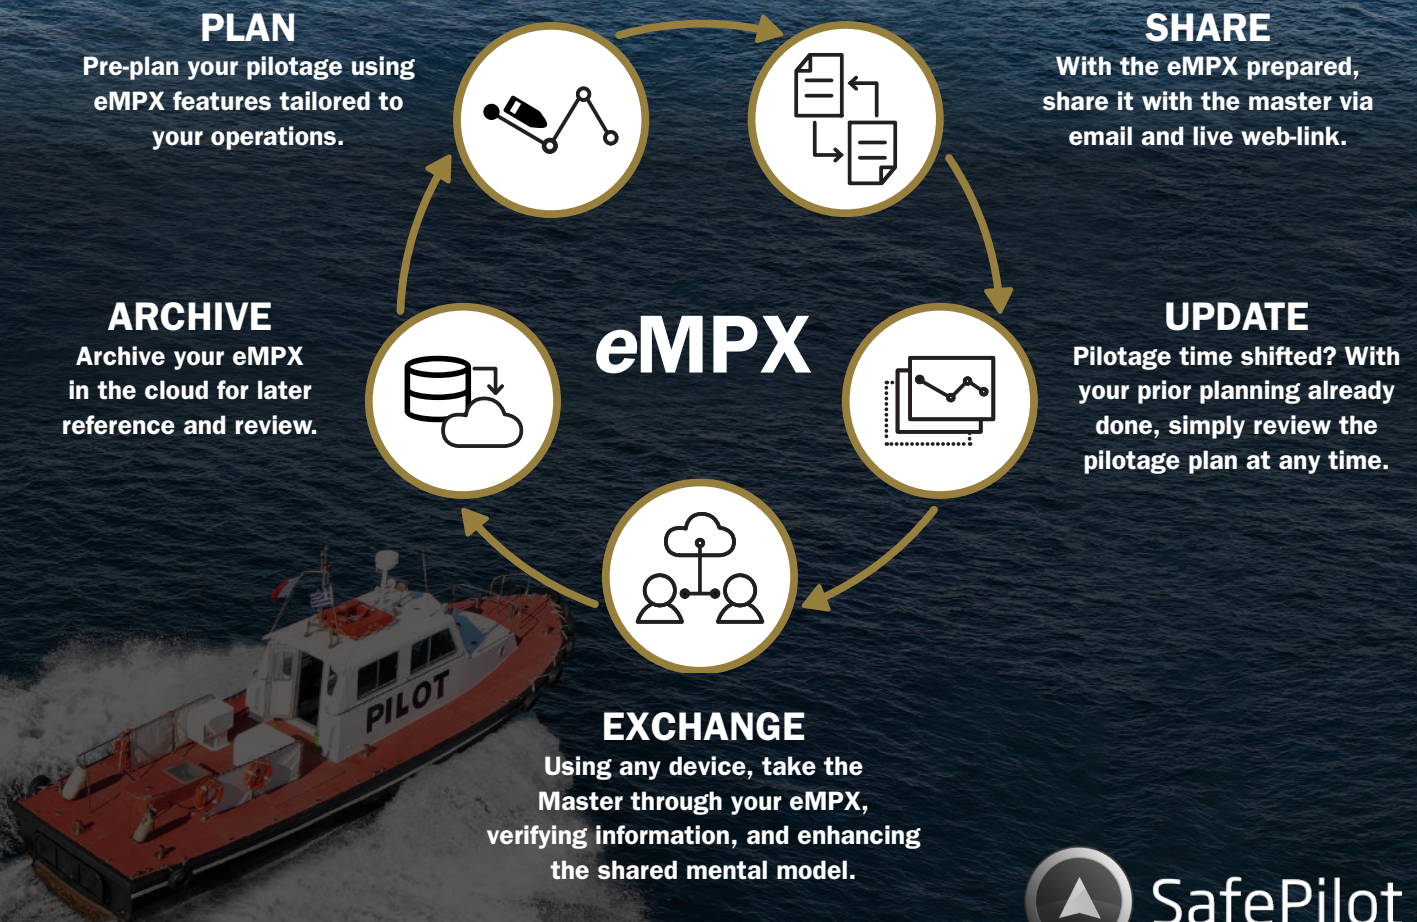

SafePilot

Master-Pilot Exchange (MPX)

eMPX is the new professional standard for Master-Pilot exchange, designed with advanced technology to enhance the shared mental model. This end-to-end solution views the exchange process holistically, adhering to defined standards to facilitate precise and dynamic information sharing between master and pilot.

eMPX broadens the exchange process by providing pilots a comprehensive toolkit to plan, share, review, and manage exchanges, aligning with port operational procedures and addressing regulatory and industry demands. Designed to elevate pilotage standards, the solution ensures quality outcomes throughout every operation.

Preparing and sharing the pilotage plan prior to vessel arrival fosters mutual understanding at the time of exchange, making the process focused on verification and confirmation, minimizing assumptions, and reinforcing the shared mental model. Automatic archiving helps pilots meet and exceed compliance requirements.

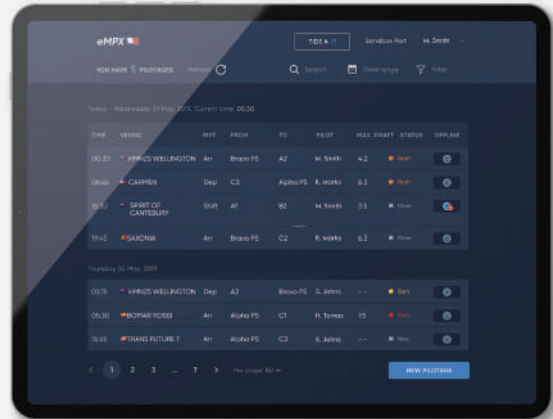

FEATURES

- Cloud based web-app, accessible on any device
- Easy set-up and customization using the administrator web-app
- Configure, manage, and update vessel details, tide stations, and passage plans
- View upcoming pilotages and MPX status
- Offline mode to access pilot plans without internet access
- Automatic sharing of MPX to the vessel once pilotage plan is complete

BENEFITS

- End-to-end pilot planning tailored to your organization
- Improve port safety by creating a shared mental model between pilot & master
- Ensure professional pilot operations by standardizing piloted planning
- Improve operational efficiency through MPX automation
- Record keeping & compliance with MPX archive, planning history and data
