Waterstop Grouting Ring

Establishes a watertight connection between manhole wall and pipe
Installs in minutes saving time and money
Great for re-establishing watertight connections at manhole after pipe bursting
Can be used with most types of pipe

INSTALLATION INSTRUCTIONS

Fit the Waterstop Grouting Ring around the outside diameter of the pipe. Position it so that the ring will be in the middle of the structure’s wall thickness.

Note: When using corrugated pipe an adapter must be used. Please refer to the Corrugated Pipe Adapter Data Sheet.

Install the stainless steel pipe clamps around the groove of the grouting ring and tighten to 60 inch pounds using a T-Handle Torque Wrench (p/n 80090).

The pipe is now ready to be mortared or cast into the concrete structure. A high-strength, non-shrinking grout is recommended for mortaring (or brick and mortaring) pipe connections in place.
NOTES:
Hole size should be a minimum of 4" larger than outside pipe diameter.
Waterstop gasket is 1 3/8" tall and 3" wide.
