

TRELLEBORG PRINTING SOLUTIONS ENVIRONMENTAL POLICY

At Trelleborg Printing Solutions we are conscious that, due to our activities of designing, manufacturing and marketing engineered fabrics and products for image transfer and substrates enhancement, for the graphic, textile, finishing and converting industries, we do interact with the Environment both positively and negatively. The top management of Trelleborg Printing Solutions commits itself to enhance our environmental performance, by means of implementing and continuously improving a Multisite Environmental Management System according to the requirements of ISO 14001.

This policy, which is in line with the Trelleborg Group environmental strategy, sets the framework for implementing and reviewing our continuous preventive strategy, to reduce at source our environmental impacts, sets our environmental objectives and action plans to achieve these objectives. All our personnel will prioritise and actively co-operate to achieve the following goals:

- Fulfil our compliance obligations, comply with applicable environmental national and international undertakings that the Trelleborg Group and TPS subscribe, as well as other applicable requirements, and follow a preventive strategy to be ready for the future.
- Implement a sustainable resource use approach by optimizing the use of energy, water and raw material in our processes.
- Take into account the environmental aspects, risks and opportunities and a preventive approach, if possible, when choosing raw materials, chemical products, packaging and distribution systems.
- Segregate waste, recycle, reuse or recover the energy content, if technical and economically viable, so to reduce the amount of waste landfilled.
- Control and minimize emissions to air, soil and water to reduce any potential environmental impact and minimize our contribution to climate change.
- Protect our employees' health and safety, reduce work risks, and provide personnel training so that they can perform their work in the best possible way.
- Take a preventive approach and introduce environmental considerations when changing processes and technologies.
- Maintain our emergency plan to prepare ourselves to face accidents, risks, fire, spillage and un-controlled emissions and reduce the consequences of such incidents.
- Create means to distribute objective information on our environmental performance to interested parties and the general public, and work along with our stakeholders to improve our environmental impact.

Lodi Vecchio, September 30th 2020

Mr. Dario Porta
BU President Trelleborg Printing Solutions
