Trelleborg prepares for ProPak Asia

Trelleborg's printing solutions operation will be attending the forthcoming ProPak Asia event, 13th – 16th June, with its range of Sava offset blanket solutions for the packaging market. Visitors will be invited to discuss their press set up and the type of work they handle, so that Trelleborg experts can advise how best to increase productivity with the most effective blanket option.

Tomaž Perčič, Director for printing solutions in Slovenia where the Sava range is made, says: "With Trelleborg's comprehensive capabilities in research and development we are able to offer blanket solutions that exactly meet the needs of packaging printers operating across a wide variety of areas and utilizing the latest technologies such as low energy UV. Some printers might not realize what a huge selection of products we offer and how we are in a unique position to provide a blanket solution that matches their requirements.

"The profitability of a press is determined by its productivity and the quality of its output. As the offset blanket is the last object to come into contact with the printed material it plays a vital and unique role in helping printers run a profitably business. We understand this completely and all of our blankets are tested extensively both in the laboratory and in the field before being launched on to the market.

"With more than fifty years in designing and manufacturing offset blankets, customers can rest assured that we know the sector. With ProPak Asia now the largest industry event of its kind in Asia, the show provides a fantastic opportunity for us to explain our solutions and we look forward to meeting printers on our booth during the event."
