

Introducing the HybridAccelerator technology

Imagine that you are looking for the ultimate solution to cover the sealing needs in your application. The more functionality and properties that are covered by the solution, the fewer your worries will be.

New opportunities for your business

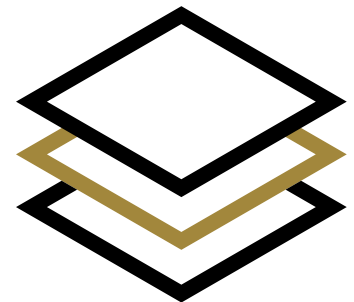

Combining EPDM and Silicone brings new possibilities in numerous ways, ensuring good mechanical & technical properties with flexibility in design, shape and color. The enhanced design options can lead to fewer products covering a wider range of applications. The combined properties can support you in making sure the right properties are in the right place.

Seal, damp and protect your application with precision.

Supporting new ways of thinking

We like to bring you that added value which stands out from the ordinary and equally gives you a peace of mind, both now and for the long run.

To get more information on what this could mean for your application get in touch.

Facts:

- High long term resilience
- Excellent UV-stability
- Very good compression set
- Extended temperature range
- Elongation control
- Strong bonding between EPDM and Silicone

Advantages:

- More functions in one solution
- Optimizing the use of soft and hard parts
- Color adaptations to your application
- Increasing the design possibilities
- Wide range of self adhesive options
