TM1000 ProgressiveTraction® Nominated Best Tire for 2019

Europneus, a Spanish magazine specializing in tires and aimed at professionals in the sector, has nominated the TM1000 ProgressiveTraction® from Trelleborg Wheel Systems as the best agricultural tire for 2019.

The TM1000 ProgressiveTraction® received the nomination from Europneus for its outstanding technology and in recognition of the performance it offers. The ProgressiveTraction® technology releases additional energy to the ground and reduces ground stress while increasing a machine's road travel performance.

Ramon Martinez, Country Manager Spain and Portugal, says: "We are really proud for this nomination which is great recognition for the performance of our products."

The ProgressiveTraction® tread design was conceived to tackle the requirements of the latest generation of machinery, increasing power transmission efficiency to the ground while reducing soil compaction. At the same time, the double-edge-lug tread design was developed to reduce vibration, lowering energy dissipation, minimizing fuel consumption and at the same time extending service life. In tests, the tire has achieved up to 3% less fuel consumption and up to 5% longer tire service life.

The awards ceremony will take place on November 28th, 2019 in Madrid. Further information can be gained from www.europneus.es/mejor-neumatico-agricultura-2019.
