ProEnergy. Sustainable solutions.

SUPER PREMIUM COMPOUNDS

LOW ROLLING RESISTANCE

Energy preservation is critical to meet your carbon footprint targets.

New from Trelleborg, the ProEnergy super premium compound is a cool running tread compound with low hysteresis for optimal rolling resistance, fuel consumption and battery life.

New rapid charging stations for electric trucks and high intensity applications have very limited downtime, dramatically increasing stresses on the tire. This energy management within the tire is optimized in ProEnergy to restrict critical heat build up.

The low rolling resistance from ProEnergy enhances tire performance, maximizing battery life for electric trucks and fuel consumption for internal combustion trucks.

Available with Pit Stop Line.
